WonderID

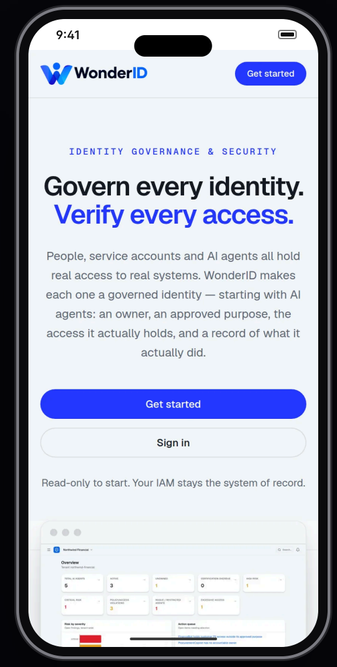

ENTERPRISE · IDENTITY GOVERNANCE & SECURITY

Govern every identity. Verify every access.

Vendor-neutral identity governance for everything that holds access — people, service accounts, applications and AI agents — starting with the identity nobody governs yet: the AI agent.

Investor overview · Live multi-tenant platform · formerly WonderAgent

AI agents got production access. Nobody gave them an identity.

1. AI agents got production access. Nobody gave them an identity.
2. No owner: provisioned by someone who has since changed teams.
3. No readable purpose: scope lives in a ticket, not where a control can see it.
4. No link between what an agent can reach and what it actually did.

WonderID

SHOULD. CAN. DID. — then every identity around it.

01

AI agent governance

Compare what an agent SHOULD do, CAN do and DID, with evidence for every gap.

02

One identity directory

People, service accounts, applications and agents, reconciled from authoritative sources.

03

Applications, onboarded properly

Discovery, validation, simulation and four-eyes approval before anything goes live.

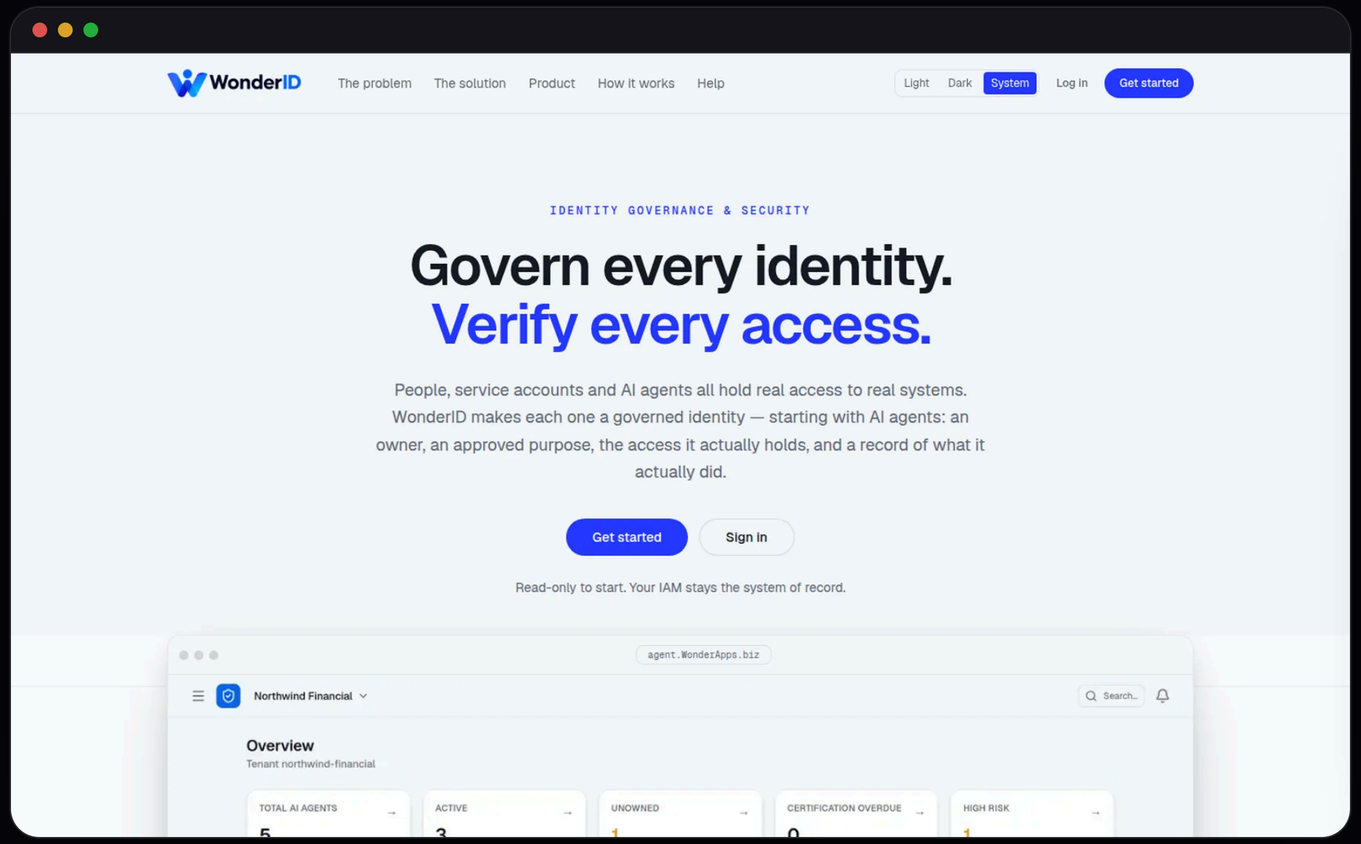

04

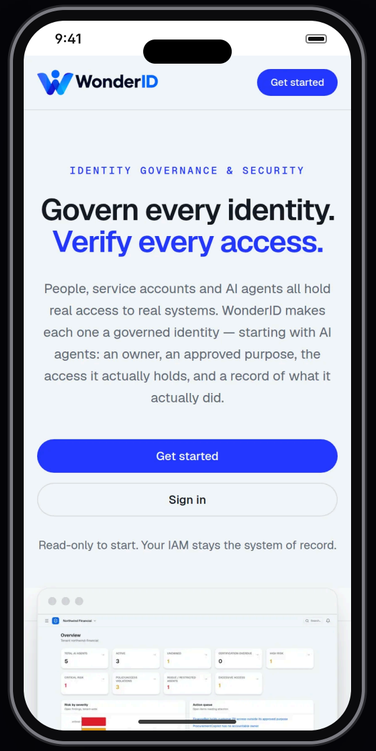

Self-service access

Request catalog, multi-stage approvals that forbid self-approval, access packages.

WonderID

A closer look

Risk ordered by what to do first; an agent inventory that is actually governed

SHOULD · CAN · DID — a critical finding, with the evidence attached

WonderID

From first touch to outcome

1

Connect

Import identities and access from existing IAM; read-only to start.

2

Declare purpose

An owner and approved apps, data and actions become SHOULD.

3

Compare continuously

Explicit rules, not model judgement, raise findings with evidence.

4

Remediate with a human

Every revocation waits for a person and is re-checked.

WonderID

Every identity is an attack surface — and most of them aren't people.

$25.96B

Global IAM market size in 2025 (forecast $42.61B by 2030)

The identity and access management market the buyer already spends in is about $26B and growing about 10% a year, with non-human IAM flagged as the faster-growing segment.

Source: MarketsandMarkets, 2025

Forecast; base year 2025, CAGR 2025–2030. Includes access management, IGA and PAM.

$8.0B

Global identity governance and administration (IGA) market, 2024 (to $27.1B by 2033)

IGA, the category WonderID sits in, is a roughly $8B market forecast to more than triple by 2033.

Source: Grand View Research, 2025

Forecast; base year 2024, CAGR 2025–2033. A segment of IAM; scopes differ by publisher.

$9.45B

Non-human identity (NHI) access management market, 2024 (to $18.71B by 2030)

Analysts already size machine and API identity access management as a separate, roughly $9B market growing about 12% a year.

Source: MarketsandMarkets, 2025

Forecast; base year 2024, CAGR 2024–2030.

More on the opportunity

109:1

Machine identities (incl. AI agents) per human identity, 2026 survey

A 2026 survey of 2,900+ security leaders finds machine identities, now including AI agents, outnumber humans 109 to 1.

Source: Palo Alto Networks (CyberArk Identity Security Landscape), 2026

Vendor-sponsored survey of 2,900+ security decision-makers.

1 in 5

Companies with a mature governance model for autonomous AI agents

Deloitte's global survey of 3,235 leaders finds agentic AI use is set to rise sharply while governance lags.

Source: Deloitte, 2026

Deloitte survey of 3,235 leaders in 24 countries.

$4.99M

Global average cost of a data breach, IBM 2026

IBM's 2026 report puts the global average breach at $4.99M, a record high, so excess access that widens a breach has a direct price.

Source: IBM (with Ponemon Institute), 2026

IBM and Ponemon, 602 organisations; breaches March 2025 to February 2026.

WHY NOW

What has changed

01 Agent adoption is outpacing governance; MCP has standardised how agents reach tools, which makes runtime observation tractable.

02 Regulators and auditors are asking for demonstrable control over AI systems, not policy documents.

03 Incumbent IGA suites are strong on human identity and bolt agents on; a vendor-neutral layer that starts from the agent and keeps existing IAM as system of record is the low-friction path in.

WHO BUYS

- Regulated enterprises in finance, healthcare and public sector
- Organisations rolling out MCP-based agent platforms
- IAM/IGA teams consolidating human, machine and agent identity governance
- GRC teams facing AI-specific audit requirements

WonderID

Enterprise SaaS, priced per tenant.

Multi-tenant from day one with a separate vendor-only platform-admin boundary for tenants, subscriptions, feature flags, usage and health. Deployment-ready today; commercial packaging follows the first design customers.

Pilot

Read-only proof

- Connect one IAM and one runtime source
- Discover and register agents
- First risk findings and a certification round

Enterprise

Governance in production

- Unlimited identities and integrations
- Identity directory, application onboarding and self-service access
- SSO/MFA, scoped roles and permissions
- Certification, evidence packs and human-confirmed remediation

EXECUTION TO DATE

Built and verifiable

Read from the product's own public engineering tracker and live site. Code, trackers and demos are available to serious parties on request.

STORIES COMPLETE

235 / 277

85% across 11 modules; the tracker grew by 74 stories when WonderID's identity roadmap was adopted

WONDERID ROADMAP

14 of 36 done

Identity directory, reconciliation, application onboarding, account inventory, requests, approvals and access packages shipped; 4 more partial

SCREENS

78 + 8

Customer pages plus the vendor platform-admin console

What compounds

01

Agent-first, identity-wide

Incumbents bolt agents onto a human model; WonderID started from the agent and extends outward.

02

Deterministic by architecture

No access or risk decision depends on a language model: an auditable promise.

03

Vendor-neutral model

Saviynt, SailPoint, Entra, Okta and MCP map into one model without any becoming the architecture.

ROADMAP

What comes next

NOW

- Business and IT roles, preventive SoD and delegations
- Provisioning and deprovisioning pipeline
- Access ledger, imported-access classification and Rogue Access management

NEXT

- Certification campaigns for every identity type
- Passkey (WebAuthn) sign-in and step-up
- WonderID Home and a My Access self-service portal

LATER

- Configuration Studio and a workflow designer
- An advisory-only WonderID AI assistant
- Partner and MSSP editions

WonderID

Seeking two to three enterprise design partners with agents in production or an identity estate to consolidate, and investors focused on security and identity infrastructure.
